

*You cordially are invited to the side event:*

**Facilitating Knowledge Generation through Community-Based Monitoring and Information Systems to Advance Attainment of Aichi Biodiversity Target and Agenda 2030**

**November 28, 2018 at 6:15 pm  
Luxor-Asia and Pacific Room, Building 1**

Indigenous peoples and local communities (IPLCs) have long been monitoring the changes within their territories through different means, developing and adopting along the way tools and approaches to better systematize knowledge generation and decision-making. In 2006-2008, as part of indigenous peoples' engagement in the international processes IPs, identified indicators relevant to indigenous peoples and some of these have been adopted by the UN CBD. These indicators were then integrated into the process of their community-based monitoring and information systems (CBMIS) in formulating community strategic plans and in their monitoring and assessment activities.

This side event will present stories from communities with the following objectives:

1. To illustrate how community-based monitoring and information systems are able to show indigenous knowledge systems and practices if maintained, strengthened and innovated on can contribute to the attainment of the Aichi Biodiversity Targets;
2. To demonstrate how indigenous peoples and local communities' knowledge systems and practices, which have a holistic perspective, also address targets of Agenda 2030 and concerns of climate change

**Co-Organized by**

**Asia Indigenous Peoples Pact ✕ Forest Peoples Program ✕ Tebtebba Foundation  
[Members of Centers of Distinction]**

**Speakers:**

**Chief Tony James, Guyana: On Indigenous Food Systems**

**Raja Rambai, Nagaland, India: Co-Existence of Nature and People**

**Florence Daguitan, Philippines: Traditional Livelihoods Development**

**Isaya Naini, Tanzania: Pastoralism: Natural Resource Monitoring and Information systems**

**Moderator: Joji Carino**

**Funded by Swedbio**
